

Perfect. Below is a **clean, structured, developer-ready specification** for implementing REP Points and Career Points into the system.

No philosophy. No fluff. Just logic, thresholds, triggers, and formulas.

REP & CAREER SYSTEM — DEVELOPER SPEC

Bag or Broke: NIL Money Moves

CORE VARIABLES

Each player must have:

```
{  
  "rep_points": 0,  
  "career_points": 0,  
  "balance_bonus_awarded": false,  
  "career_thresholds_unlocked": [],  
  "rep_thresholds_unlocked": []  
}
```

PURPLE TAB IMPLEMENTATION

Trigger

When player lands on a purple board space.

UI

- Open "Purple (REP + Career)" tab
 - Dropdown list of selectable events
 - On selection → auto-apply REP + Career
-

Purple Event Table

```
[
  { "name": "Resume Workshop", "rep": 2, "career": 1 },
  { "name": "Community Service", "rep": 4, "career": 1 },
  { "name": "Leadership Retreat", "rep": 2, "career": 2 },
  { "name": "Landed an Internship", "rep": 1, "career": 3 },
  { "name": "Graduate On Time", "rep": 2, "career": 4 },
  { "name": "Get Mentored", "rep": 1, "career": 2 }
]
```

Logic

```
onPurpleSelection(option):
    player.rep_points += option.rep
    player.career_points += option.career
    logEvent("purple", option)
    checkThresholds()
    checkBalanceBonus()
```

3 LUXURY → REP AUTO AWARD

Every luxury purchase automatically awards REP based on cost tier.

REP Tier Table

Cost Range	REP Award
3,500–5,000	+1
6,000–10,000	+2
12,000–20,000	+3
25,000–40,000	+4
50,000–75,000	+5
80,000–120,000	+6
150,000–200,000	+7
250,000+	+8

Logic

```
onLuxuryPurchase(cost):
    rep_award = getRepFromCost(cost)
    player.rep_points += rep_award
```

```
logEvent("luxury_rep", rep_award)
checkThresholds()
checkBalanceBonus()
```

INVESTMENT SET COMPLETION → CAREER POINTS

Career Points are automatically awarded when investment sets are completed.

Offensive Planning Set

Own:

- Stocks
- ETFs
- Bonds

Reward:

+10 Career Points

Real Estate Build Set

Own:

- Vacant Property
- Renovated Property
- Any Rental Strategy (Long-Term OR Short-Term)

Reward:

+10 Career Points

Defensive Planning Complete

Own:

- Any Life Insurance

- Any Annuity
- Health/Disability Protection
- Legal Protection
- Umbrella Liability

Reward:

+15 Career Points

Logic

```
onSetCompletion(set_id):  
    if not already_awarded(set_id):  
        player.career_points += set_bonus  
        markAwarded(set_id)  
        logEvent("career_set_bonus", set_id)  
        checkThresholds()  
        checkBalanceBonus()
```

5 CAREER POINT THRESHOLDS

Unlock once per threshold.

Career Points	Effect
10	+5% NIL payout
25	Reduce one negative investment roll by 5%
40	+10% NIL payout
60	Unlock "Elite Professional" status

Logic

```
checkCareerThresholds():  
    if career_points >= 10 and not unlocked(10):  
        unlockNILBonus(0.05)  
  
    if career_points >= 25 and not unlocked(25):  
        enableInvestmentProtection(0.05)  
  
    if career_points >= 40 and not unlocked(40):  
        unlockNILBonus(0.10)  
  
    if career_points >= 60 and not unlocked(60):  
        unlockEliteProfessionalBadge()
```

REP POINT THRESHOLDS

REP Points	Effect
10	+5% brand-related ROI
25	Reduce one curveball penalty by 25%
40	+10% sponsorship payout
60	Unlock "Market Icon" status

Logic

```
checkRepThresholds():  
    if rep_points >= 10 and not unlocked(10):  
        enableBrandROI(0.05)  
  
    if rep_points >= 25 and not unlocked(25):  
        enableCurveballReduction(0.25)  
  
    if rep_points >= 40 and not unlocked(40):  
        enableSponsorshipBonus(0.10)  
  
    if rep_points >= 60 and not unlocked(60):  
        unlockMarketIconBadge()
```

BALANCE BONUS SYSTEM

Qualification

```
if abs(rep_points - career_points) <= 10  
AND rep_points >= 20  
AND career_points >= 20  
AND balance_bonus_awarded == false
```

Reward:

- +\$250,000
- +5% ROI boost to one chosen investment

Mark:

```
balance_bonus_awarded = true
```

8 ENDGAME SCORING CONVERSION

Final Score Formula:

```
final_score =  
    net_worth  
    + (career_points * 10000)  
    + (rep_points * 5000)  
    + (balance_bonus ? 250000 : 0)
```

9 REQUIRED FUNCTIONS

System must include:

- `checkCareerThresholds()`
- `checkRepThresholds()`
- `checkBalanceBonus()`
- `onPurpleSelection()`
- `onLuxuryPurchase()`
- `onSetCompletion()`

Each threshold unlocks once only.

10 DESIGN PRINCIPLE ENFORCED

REP = Brand Strength

Career = Professional Discipline

Both:

- Affect gameplay
- Affect income
- Affect risk
- Affect endgame scoring

Players are rewarded for:

- Balance
- Discipline
- Brand consistency

This is now a complete, structured, implementable system.

If you'd like, next I can produce:

- A simplified “Lite Version” if dev complexity becomes an issue
- Or a full integration sheet aligning REP/Career with Avatar logic.
